Water is important to the community because it helps the environment. It helps the environment because it's how we live and how we get by. We shouldn't waste water because then we're killing the environment. We should save water because we can save electricity. If we had no water I would die. So it is very important for people and animals to have and save water.

Recycling is very important because if we didn't recycle then we wouldn't have any <sup>native</sup> animals in Hawaii. There wouldn't be any trees to make the environment look better or to give us oxygen. If we don't reduce, reuse, or recycle then the other birds will be dead. If we don't recycle then fish, birds, and other animals will not survive with plastic in their stomachs. Recycling will make us people and animals feel good about saving the sick animals.
