

The first I learned that the ocean belongs to everyone and the all the sea animals and I learned that it is important to keep our environment clean because if the water is dirty then we won't get to swim in the beaches and if somebody is fishing they might catch a dead fish with plastic. The other thing I learned was that it's important to Tokelau and Hawaii to keep the ocean clean because Tokelau and Hawaii rely on the ocean. They catch fish but if the ocean was dirty they will say you can't fish or swim in the water because the water is dirty. So that's why it's important to Tokelau and Hawaii to keep the water clean. The other thing I learned was how I can make the ocean safer. This is what I said, "I can make the ocean more safer by helping to pick up all the rubbish on the beach and out of the ocean. and not litter or it will end up in the ocean. The last thing I learned was that as a community what can we do? We can use, reduce & recycle plastic bottles, and aluminum, paper, and glass. We also can use the trash for decorations and we can use the recycled things to be used to make things like an Inshore ment or for a Project.
